

AIS Managed NMS

AIS Managed NMS makes network monitoring easy

Ensuring IT infrastructure performance and reliability is no small feat. For IT Leaders at small and medium-sized organizations, the challenge is even greater. Burdened with enterprise-sized responsibilities and SMB-sized resources, optimization through Network Monitoring System (NMS) tools are often difficult to prioritize for the required time and expense.

Provided as a turn-key solution, AIS Managed NMS allows SMBs to track and monitor device and application performance, reliability, and configuration without burden on internal IT resources.

How AIS Managed NMS Works

AIS Managed NMS was designed to provide Enterprise capabilities to SMBs. Combined with access to an experienced team, AIS delivers an innovative approach to device and application monitoring.

Delivery Experienced AIS consultants implement, configure, and maintain the NMS, with a NOC (Network Operations Center) to coordinate monitoring alerts for trends and anomalies.

Technology The SaaS platform architecture utilizes both proprietary and open-source code, allowing for efficient development resulting in faster-to-market functionality for innovative product features and robust security.

Implementation Agentless deployment allows clients to be up and running on AIS Managed NMS in under a week, without any on-premises hardware or software.

Integration AIS NMS has the ability to aggregate data from network-connected devices and applications from all manufacturers and developers. Flexible compatibility with on-premise, cloud (AWS, Azure, etc.), third-party SaaS platforms, or hybrid infrastructure architectures is easily achieved with AIS NMS.

Customizable dashboards show real-time and historical metrics at a glance. Flexible alerting capabilities range from Slack or Email notifications to automated calling or texting with IBM Watson. Example alerts can include a trace route with ISP account number or Graphs of Memory, Storage and Processor usage, along with a direct web link to the Device page on AIS NMS for quick access.

The Benefits

With AIS Managed NMS, organizations can:

- **Reduce time spent on root cause analysis**, the single largest time constraint on technicians
- **Reduce internal IT resource strain** with an affordable turn-key managed service
- **Increase ROI** by maximizing the efficiency and value of enterprise technology investments
- **Increase employee productivity** organization-wide by reducing the number and impact of outages and issues

Makes network monitoring easy for SMB
