

AIS Managed VoIP

AIS Managed VoIP Provides Reliable and Affordable Business Voice Service

While office phone use continues to decline as communication methods become more fragmented, office phone system and service prices have remained high. AIS Managed VoIP is a low-cost, highly reliable, robust alternative that meets the needs of the modern office environment.

Stable and Reliable

AIS Managed VoIP uses Asterisk, the most mature and widely deployed VoIP server available. It is hosted in Amazon Web Services with geo-redundant availability zones, and connects to the public phone network using geo-redundant sip trunks provided by Twilio for carrier grade reliability. Remote phone and mobile app calling provide flexibility to ensure continuous communication during local internet or power outages.

Robust

AIS Managed VoIP has the features that matter most to growing organizations, including:

- Local or Toll-Free Phone Number Porting
- Unlimited Calling
- Conference Bridge
- Auto Attendant with Conditional Call Routing
- Hunt Groups
- Local and International Phone Numbers
- Voicemail-to-Email with IBM Watson Speech-to-Text
- Fax-to-Email
- Call Recording
- Analog Line Support for Fax Machines and other Legacy Devices
- SIP Phone and Mobile App Compatibility

Low cost

Built using cloud technology, the monthly fee for AIS Managed VoIP is typically **25% to 50% lower than traditional phone services**. Flexible service plans allow for Customers to use existing SIP-compatible VoIP Phones or VoIP Phones provided by AIS for a fully managed solution.

  **25% to 50% lower**

 **Traditional Phone Services**
